## WHAT IS CLAIMED IS:

1	1.	A method of connecting a terminal fitting and an electric wire,
2	compris	sing the steps of:
3		providing a terminal fitting;
4		providing an electric wire;
5		providing a conductive connecting member formed with an insertion
6	hole;	
7		inserting the electric wire into the insertion hole of the connecting
8	member;	
9		compressing the connecting member radially inwardly so as to caulk
10	an inserted portion of the electric wire uniformly over a whole periphery	
1	thereof; and	
2		welding the connecting member and the terminal fitting by applying
13	ultrason	ic wave.
1	2.	The method as set forth in claim 1, wherein the connecting member is
2	compres	ssed and shaped by rotary swaging.
1	3.	The method as set forth in claim 1, wherein the connecting member
2	includes	s a first hole portion and a second hole portion which is larger than the
3	first hole	e in diameter;
4		wherein the electric wire has a core wire covered with an insulating
5	sheath;	
6		wherein the core wire is inserted in the first hole portion and the

- insulating sheath is inserted in the second hole portion, and the first hole portion and the second hole portion are disposed coaxially with each other; and
- wherein the connecting member is compressed so that the insulating sheath is held in intimate contact with the second hole portion.
- The method as set forth in claim 1, wherein the terminal fitting is
  provided with a clamping portion; and
- further comprising the step of press-clamping the terminal by the clamping portion.
